

Lung cancer causes more deaths than any other cancer. The good news is that early detection through lung cancer CT screening can significantly improve your likelihood of survival.

- 85% of high-risk patients can be cured once a CT screening detects lung cancer
- 92% cure rate with early detection and appropriate treatment
- 40% of ruptured brain aneurysms are fatal
- Without early screening, over 95% of lung cancer patients die within a few years of diagnosis

# LUNG CANCER SCREENING

DRH Imaging offers a low dose Lung Cancer CT, the technology of choice for lung cancer screening studies. You should get screened if you:

- Are a current or former smoker
- Are age 55 to 74
- Have a smoking history of 30 pack-years or more (1 pack a day for 30 years, two packs a day for 15 years, etc.)

DRH Imaging offers CT Lung Screening for FREE if you meet the above criteria.

Before scheduling a lung cancer screening CT, discuss these risk factors with your healthcare provider:

- Contact with radon, arsenic, beryllium, cadmium, chromium, nickel, asbestos, coal dust, soot, fine industrial particulates, benzene, formaldehyde, formalin, silica, diesel fumes, or other cancer-causing agents
- If you have had other cancers such as small cell lung cancer or smoking-related head and neck cancer
- Family history of lung cancer
- Exposure to secondhand smoke
- Having radiation therapy to the chest for other cancers, especially if you smoke
- Having treatment for Hodgkin's lymphoma with alkylating agents (a type of cancer drug)
- Having other lung diseases such as COPD or Pulmonary Fibrosis

DRH Imaging is a state-of-the-art outpatient facility designed to meet all of your diagnostic and imaging needs. The center includes top-of-the-line MRI, state-of-the-art CT, ultrasound, digital x-ray, digital 3D mammography, Dexa, and breast MRI equipment. Our credentialed technologists and experienced team provide personalized attention.

Take a preventative approach to your health. Schedule your Lung Cancer Screening CT today!
